

Patch notes for QualiWare 10.9

qualiware

1 Introduction

This document contains a list of defects fixed in Release 10.9. Defects fixed in 10.8 and beyond can be found on QualiWare Center of Excellence:

<https://coe.qualiware.com/resources/documentation/>

Each defect includes:

- The defect number, which provides a reference in number
- The defect title, which provides a reference in meaningful text
- The defect description, which will provide a short description explaining what problem has been solved.

If details are required, please contact QualiWare's Service Delivery Manager at the following email: Claus.Pedersen@QualiWare.com.

2 Defects fixed in QualiWare 10.9

Here are the defects fixed in QualiWare 10.9:

Defect	Title	Description
DF-0730	Business Capability Model a context sensitivity.	Diagrams at Business Capability Model are not context sensitive. A diagram with X number of capabilities, would in context show ALL capabilities. This now shows the correct capabilities.
DF-0789	Generic Highlight GenericQuery fail if rebuilt from QueryDesign.	Generic Highlight Query are broken if rebuilt from QueryDesign. Opening any query other than Generic Highlight, such as opening 'Generic Highlight - Has IT Support', the query ends with: WHERE T01T02HasITSupport <> - This has now been fixed
DF-0792	Visualizer Expansion not part of ootb experience.	Visualizer expansions are not part of the out-of-the-box experience, when setting up a new repository. This has now been added.
DF-0793	Model Gallery loses data.	Expanding at 1 st level in a model gallery, loses BreaksDownTo data. This data now remains.
DF-0794	Visualizer mode launches differently from explorer and Dashboard.	Launching visualizer mode from dashboards brings up the visualizer immediately – whereas launching from the explorer brings up a pop-up asking for confirmation. This has now been made more consistent.
DF-0795	Model Gallery - dropdown menu unpredictable.	Right-clicking to bring up the dropdown menu suffers unreliable load times and does not always pop up where you clicked. Loads are generally faster now.

DF-0800	Error in displayed colors on events.	When creating/editing BusinessProcessDiagrams in the web modeler, all events with a different color than the default, changes shape and size. This has been fixed.
DF-0801	No sortOrder in webqueries.	It is not possible to provide a sortOrder to content fetched by webqueries. This has been fixed.
DF-0803	QCL engine generates a new folder every 10 seconds.	In rare cases the QualiWare Service Account QCL-Engine, would create new, empty folders around every 10-30 seconds. Root cause was found and has been prevented from recurring.
DF-0804	HTMLMegaMenu not working with URLs.	If you put in a regular URL in a MegaMenuItems url field (Web address), the link only works if you right click and select "Open in a new tab". You can now click it normally.
DF-0805	QEF login error on AAD joined windows server.	Attempting to log in to QEF, through Local channel, results in an error on AAD joined windows servers. This has been fixed.
DF-0806	Per user Licenses not properly shared to groups.	Per user licenses are not properly shared to groups via AD-sync. Assigned licenses counts one too many. The count is now more accurate.
DF-0807	JumpOnLink doesn't work for certain symbols.	If you open the BusinessProcess template definition, and make it jump on link on BreaksDownTo, you will notice that it doesn't work on the web. This has been fixed.
DF-0810	Error statement when importing in QLM.	An error message would appear in the message window every time an import was done on older export files (10.0.4 and older) – even if the repository worked. Source of error has been found and corrected.
DF-0811	Azure AD B2B issue.	In 10.8.1 Azure AD B2B does not work with SCIM and fails with Microsoft Graph sync. This has been fixed.
DF-0813	License status shows 0 of XX.	In QEF console, assigned concurrent licenses would sometimes show as 0 used out of XX – even if some were in use. Root cause was found and has been corrected.
DF-0816	Filtering on template does not work.	HTMLContentTab does not filter select templates as expected. It now filters as intended.
DF-0817	Filtering in context box not working as intended.	HTMLContextBox does not filter as expected with certain parameters. Filtering has been made more logical with certain parameters.
DF-0818	Problems with Data grid.	Data grid entries configured to open via IFrame (pop-up) opens on a new tab every time. Now opens in pop-up.

DF-0819	After an export -> import, governance state has changed	Importing the objects into a fresh new repository (containing the governance workflow) and running the maintenance, results in changed governance state of certain objects. The governance state now remains.
DF-0821	Pop-up window stays open when going to a new page.	Clicking on (e.g.) a business process in a BPN diagram opens a pop-up for the process. Pressing the home button to return to the landing page, does not close that pop-up window. Now closes as intended.
DF-0822	"Edit symbol label" missing default values.	Pressing "Edit symbol label" in QLM results in an error message "Error in justification. Value." Due to missing default values. This has been corrected.
DF-0825	Importing google CloudServices in QLM.	When importing Google CloudServices in a QLM Repository, it adds an extra CloudProvider with no content or functionality. This provider is no longer added by default.
DF-0827	Errors with Export All.	'Export all' of very large repositories sometimes "crashes" and creates an (almost empty) 1KB file. This has been fixed with a new feature.
DF-0828	Graphical properties not available in web.	Certain graphical relations are not / cannot be shown in web. More relations are now included in QWM.
DF-0829	BPN:ArchiMate cannot assign owner/responsible.	In QLM, BusinessProcessNetwork:ArchiMate cannot assign owner/responsible as a blank field overlaps when you try to press the buttons. This was fixed with a patch.
DF-0834	QueryDesign timeout for large amounts of data.	Large amounts of data in querydesign results in timeout and stops loading under the right conditions. Loads are generally faster now.
DF-0835	QueryDesign Attribute search results in timeout under the right conditions.	QueryDesign attribute (BelongsToCategory w/multi link and various templates => HTMLQueryResultView) Search gives timeout. Loads are generally faster now.
DF-0836	Web notifications leave small lines in the corner.	The blue notification box that's seen on a diagram after it has been edited by a different user, leaves a permanent small line in the corner. Root cause was found has been corrected.
DF-0838	RequirementModel font color not displayed in dashboard.	When changing the font color of a Requirement in a RequirementModel Diagram, the new color will not be shown on the diagram dashboard view. This is now fixed.
DF-0840	Unknown repository Object: Invalid GUID.	GUID is wrong (changed) after importing and publishing diagram in new repository. This now remains the same.

DF-0841	Exclamation mark in License tab does not show correctly.	Under specific conditions the orange exclamation mark icon in QEF license window will glitch out and be partially / not visible at all. This is now more visible.
DF-0842	QEF Role: Limited users and groups error.	When assigning the QEF User Role: "Limited User And Group Administrator", you should be able to create groups, but it doesn't allow you. This has been fixed.
DF-0843	Unattended installer fails when SQL login is used.	Unattended installer fails when SQL login is used for an upgrade. This has been corrected.
DF-0844	ReportDefinition doesn't work with Topological sorting.	When the contains relation is set with Topo(logical) sort, the Associated Document table as well as certain other parameters can't be read. Topo sorting now works.
DF-0845	ReportDefinition: AuditMD crashes the data output.	AuditMD in a WorkFlowDiagram query works simply by adding it in the attributes list. Adding the AuditMD to the Activities the same way makes the query crash. Query functionality has now been improved with parameters.
DF-0848	Text-To-Model has a minor spelling error	Text-To-Model has a minor spelling error in the separator field (was spelled 'seperator'). This has been corrected.
DF-0851	Large Rep dump copy/load fails in 10.8.2.	Very large repository dumps (tested 3.5+ gigabytes) fail when loaded in 10.8.2. Results in partially empty repositories or missing links in Template Definitions. This is fixed with a new feature.
DF-0852	When setting the date of an accident in QLM, web will show it as 1 day prior.	When setting the occurrence of an accident in QLM and viewing it on the web frontend, it will be shown as having happened 1 day earlier on web. Time now reads more accurately.
DF-0853	Language variant selection missing in QLM.	Language variant button missing from QLM in 10.8.x versions. This has been fixed.
DF-0855	Date format ddMMyyyy displayed incorrectly.	When changing the default date format in QLM to 'dd MM yyyy', the format displays them in an unreadable state (something close to 'yy y dd y'). This has been fixed.
DF-0856	Visual error in symbol on initiatives in Strategy Model.	When linking an Objective object to the Initiative object though the Strategic Alignment attribute, the button that it creates on the object in the diagram is blank, rather than showing the symbol for an Objective. Symbol has now been adjusted.
DF-0857	Personal Page, not updating correctly if first page isn't default for all.	When the first page on Personal Page in the publisher is not default for all ("=Default" role filter), the desktops will not update correctly, regardless of role. This has been fixed.

DF-0860	Hierarchy View not sorting as expected.	Hierarchy View does not sort alphabetically when it has sorting set to Order by 'Name'. Now sorts correctly.
DF-0862	Missing web translation features in QLM.	The French language variant encounters translation errors in web and QLM. Some of these errors have been corrected.
DF-0866	Copy to dump "crashes" QLM.	When copying to a dump in "big" repositories, QLM may sometimes "crash" meaning that it freezes completely until the dump has been copied. This has been fixed with a new feature.
DF-0868	DDL for SQL type missing on foreign key.	Generated RelationalDiagrams do not add a type to the foreign key. This has been corrected.
DF-0873	Web risk control matrix doesn't save properly.	When editing risks on web via the Risk Control Matrix, likelihood and significance is not visible in the matrix. If defined in the matrix and saved, they will be visible from heatmaps, but not in the matrix if you reopen it. This now shows more accurate data.
DF-0874	Insert hyperlink dialogue is too small.	In the fullscreen text-editor on web - Insert hyperlink dialogue box is too small, which results in users needing to scroll. This has been resized so scrolling is not necessary.
DF-0876	Images not behaving as expected on web.	Using exported objects from a 6.6 repository, in 10.8, the images in description fields are shown as their obj-ID. Workaround has been found.
DF-0878	HTMLDashboardItem filters do not work on ArchiMate templates.	HTMLDashboardItem "TableOverview - Context" filters do not work on ArchiMate Templates. Works fine for other templates. ArchiMate has been included to work here.
DF-0879	Deliverable:ArchiMate object cannot change color.	Using "appearance -> colors and lines", Deliverable:ArchiMate objects cannot change their color. This has been fixed.
DF-0880	"Choice" dropdown hidden behind footer.	When selecting the "Choice" field type in a HTMLDialogField, the footer will cut off the dropdown. The dropdown is now more intuitive.
DF-0886	QEF freeze and QiS connection lost.	In rare cases on installations with MANY repositories, QEF may sometimes freeze up for several minutes and QiS connection will be lost in the meantime. This has been fixed with a patch.
DF-0891	ArchiMate CourseOfAction error.	On an ArchiMate diagram you should be able to make an "Influence" connection from a CourseOfAction object. Trying to create this connection results in error. ArchiMate connections have been adjusted.

DF-0892	Governance actions not appearing on web when responsible is OrganizationUnit.	If a diagram has a responsible in the form of an OrganizationUnit (where user is included), the governance buttons do not appear for that diagram on the web portal. This has been fixed.
DF-0893	Gateways get different icons when diagram is created on web.	When creating a BPD via the Web Modeler, the icons on gateways appear as they should (in QLM) in the modeler, but when viewing the diagram, the icons change. This has been fixed.
DF-0896	QEF deadlock.	All QualiWare systems become unresponsive due to QEF deadlock. Similar to DF-0886. This was fixed in a patch.
DF-0897	Enlarged icons on web.	BusinessProcessDiagrams in the web modeler have some icons not adjusting to selected size. This has been fixed.
DF-0898	Business Events have unpredictable behavior in QWM.	Business Events have several unpredictable behaviors in QWM – randomly change color and shape, symbol icons showing one thing before saving and another after. This has been corrected.
DF-0901	RASCI values not returned when sorting topologically.	In QueryDesigns, if topological sorting is used in BreaksDownTo or Contains, RASCI values can't be returned. Topological sorting no longer causes known issues.
DF-0902	QWM: Notes overwritten with "false".	Notes in web modeler have their name overwritten with "false" when you attempt to enter a name on the note. Fix has been made in QWM.
DF-0903	QWM missing bridge butpans.	Web modeler missing butpans for Bridge symbols. These have been added to QWM.
DF-0906	QualityAudit icons wrong on web.	On the web frontend, editing a QualityAudit changes the icon to a standard folder icon, instead of the actual icon. Icons now display correctly.
DF-0907	QWM: Copy-pasting text into a note description breaks note.	When copy-pasting text into a note description in the web modeler, the note is overwritten with "false". This has been fixed for most sources.
DF-0908	Connection style reverts after saving in QWM.	Right clicking a connection style to change it in the web modeler, reverts after saving the diagram. This is fixed.
DF-0909	Diagrams not available when opening from an expanded dropdown.	When opening a diagram from a list, on a new tab - if the dropdown has been expanded the diagram page will not be available before refreshing the site. Diagram now displays without refresh.
DF-0916	ArchiMate connections missing from QLM to QWM.	Certain ArchiMate connections are missing in QWM, but are present in QLM, when modelling. More ArchiMate functionality has now been added in QWM.

DF-0918	ArchiMate relationships causing errors.	When creating relationships from ArchiMate "Course of Action" object, there are syntax errors that should not be there. These errors have been handled.
DF-0921	Query fails when person has apostrophe in name.	If a person or object has an apostrophe (') in their name, GenericQuery will fail. Queries can now take more characters.
DF-0925	Encoding changes unprompted in external document.	External Documents linking to sharepoint files, would unprompted change encoding, making links unreadable. Root cause of this was found and has been corrected.
DF-0926	Report definition diagram images are created with an http link.	When using the diagram image from a query in Report Definition, the URL that the diagram is received from is an HTTP link, which doesn't work with some servers. This has been corrected to an HTTPS link.
DF-0929	Saving a diagram as SVG cannot show special characters.	Saving a diagram as SVG, from the Web Modeler, cannot show special characters (like æ, ø, å) on objects. A fix has been made so special characters are displayed properly.
DF-0937	"Network connection lost" popup error message.	The "To do" standard HTMLTile would in rare cases cause a popup error message saying: "Network connection lost". Root cause for this has been found and corrected.
DF-0941	Transparency of Note objects differ from QLM to QWM.	In QLM, a Note object that has been made semi-transparent would be fully visible when viewed in QWM. The opacity values have now been corrected.
DF-0943	GWE Buttons require a refresh on web.	In certain situations, GWE buttons would not appear on the Web portal until the page was refreshed. Root cause has been found and a fix has been implemented.
DF-0946	Missing symbols on InfrastructureDiagram.	Using the standard Metamodel, InfrastructureDiagrams have missing symbols. These have now been added.
DF-0947	"Show field" feature doesn't work for SystemComponents.	The "Show Field" feature does not work as intended for SystemComponents. This has been corrected.
DF-0954	ApplicationUsageViewpoint:ArchiMate Template Dashboard does not display all attributes.	ApplicationUsageViewpoint:ArchiMate Template Dashboard does not display all attributes properly. This has been fixed, and attributes are now displayed correctly.
DF-0956	Capabilities 'hide' more than intended.	In a CapabilityModelDiagram, if the option to hide certain Capabilities was used, more would be hidden than intended. This now hides the correctly marked capabilities.
