

Patch notes for QualiWare 10.10

qualiware

1 Introduction

This document contains a list of defects fixed in Release 10.10. Defects fixed in 10.9 and beyond can be found on QualiWare Center of Excellence:

<https://coe.qualiware.com/resources/documentation/>

Each defect includes:

- The defect number, which provides a reference in number
- The defect title, which provides a reference in meaningful text
- The defect description, which will provide a short description explaining what problem has been solved.

If details are required, please contact QualiWare’s Service Delivery Manager at the following email: Claus.Pedersen@QualiWare.com.

2 Defects patched in version 10.10.

Here are the defects fixed in QualiWare version 10.10.0.19:

Defect	Title	Description
DF-0915	Issues with links in description field on web.	If you would insert a link on pre-written text (ctrl+L), the text would not appear as a link on web. This has been fixed so links are displayed the same regardless of creation.
DF-0929	Saving a diagram as SVG cannot show special characters.	SVG can now show special characters.
DF-0930	Certain Generic Queries cannot be displayed on HTMLContentTabs.	These are now displayed as expected.
DF-0939	Saving a QualiWare standard report as RTF creates a watermark on every page.	This no longer makes watermarks.
DF-0953	Association:ArchitMate relationship between value and realization:ArchiMate behaving unexpectedly.	Expected behavior has been implemented correctly now.
DF-0965	Group objects turn white instead of transparent in QWM (QualiWare Web Modeler).	Changing the opacity of a Group object in QWM would make it whiter, instead of more transparent. Opacity now functions correctly.
DF-0969	EDGY: Template “content”, “asset” and “channel” are not available out of the box.	These have now been added (with full EDGY graph syntax).

DF-0975	“All responsibilities” not loading properly after changing role.	This now shows correctly after a role change.
DF-0977	External Document references in Descriptions don’t update.	Reference to External Documents from Description fields do not update if the External Documents name is changed. This now updates correctly.
DF-0978	Cloud Architecture has issues with Graph syntax – missing icons and wrong names of templates.	Graph syntax and several of the visuals have been updated for Cloud Architecture.
DF-0981	Business Processes border color changes to white from QWM.	Business Processes now correctly get the selected border color displayed in QWM.
DF-0984	HasITSupport vs HasItSupport	HasITSupport was spelled differently in different objects, now it’s spelled the same.
DF-0985	Missing metalink information on Information Systems.	The missing metalinks have been added to Information Systems.
DF-0986	Missing metalink information on Strategy.	The missing metalinks have been added to Strategy.
DF-0989	Default date format is not respected if attribute value is yyyy-MM-dd.	A change has been implemented that allows for more accurate date-formats.
DF-0995	Opening Qualihelp from QWM forces an error when drawing connections.	Qualihelp no longer causes any errors.
DF-0998	GWE warning window “continue” button does not work.	Continue button now works as intended.
DF-1014	“Send publishing request” shows Private Workspace diagram in base configuration.	Under specific circumstances, “Send publishing request” would publish a Private Workspace diagram in the base configuration. This occurred due to a bug that has been corrected.
DF-1015	External Document JumpOnSingleLink sometimes cause an error in path.	This path error has been corrected.
DF-1018	HTMLDashboard settings reset everytime QLM is restarted.	These settings now persist (assuming they’ve been saved) even if QLM is closed.
DF-1023	InformationFlows are deleted when opening certain diagrams in QWM.	The InformationFlows now remain in QWM as intended.
DF-1024	ContainedIn field is empty in HTMLTile.	This now contains data as expected.
DF-1025	QSQL Topological sorting on reused symbols throws exception.	The topological sort now returns the expected data.
DF-1026	Missing link to attribute for “Concept” template.	Concept’s description attribute link is absent when viewed from other sources i.e. QueryDesigns. Attribute is now added.
DF-1029	Characters ‘æøå’ in exported PDF from spreadsheet do not display correctly.	These are now displayed as expected.

DF-1033	Colors of a People symbol on a Business Eco System cannot be changed more than once.	Option to edit the symbol has been corrected.
DF-1034	'&' character in name for document structure prints, causes "file not found".	This has been corrected.
DF-1037	HTMLContentBox in classic view fails to load data when object does not exist in current configuration	Content box now loads data regardless of configuration, but only shows data that is supposed to be seen – e.g. Base can't see Private Workspace data.
DF-1040	Ampersand in title displays incorrectly on web.	This now displays as expected.
DF-1041	Certain ArchiMate viewpoints are not included in standard Governance Workflows.	These have now been added.
DF-1046	Content boxes sometimes show content from Base configuration in private workspace.	Content boxes now have correct content and links that act correctly.
DF-1047	Text is not properly aligned on Note objects created in QWM.	This has been adjusted to better align on notes.
DF-1048	Dashboard: Hover (mouse over) effect doesn't work as expected for activities.	Hover now works as expected on activities.
DF-1049	Business Processes change form/shape after color change in QWM.	These no longer change their shape if color is changed.
DF-1054	Business Capabilities – Icon's behaving unexpected.	Icons now behave as expected.
DF-1056	Zooming in on a diagram in QWM sometimes prevents connections from being drawn between objects.	This has been fixed so connections can be drawn when zoomed in.
DF-1059	'Export publisher' exporting more data than intended.	This now only exports the publisher and it's settings.
DF-1065	Links inserted on Notes from QWM cannot be displayed.	Links on notes are now displayed correctly when inserted from QWM.
DF-1066	Yellow warning label does not appear on web when it should – i.e. When trying to open a document that no longer exists.	Yellow warning label now appears when relevant.
DF-1067	Certain ArchiMate symbols are not displayed correctly.	These are now displayed as expected.
DF-1069	Highlight: "Symbol valid-to < 30 days" Dashboard item doesn't consider revisions.	This has been fixed to include correct objects/symbols despite revisions.
DF-1072	Label given to an object on a HTMLMegaMenu Item is not shown correctly when viewed on the web.	Labels have been adjusted to show as expected.

DF-1081	Images added via web are not working correctly in various aspects of the software.	The way QualiWare reads SVG's has been updated to prevent this.
DF-1086	Diagram navigation buttons are broken.	These now work as expected.
DF-1087	"Create label" not translated under specific circumstances.	"Create label" is now translated as expected.
DF-1089	QRV: Not possible to filter objects from a Remote Repository.	These can now be filtered as expected.
DF-1090	Deliverable:ArchiMate inconsistencies in connctions design.	Connections are now drawn correctly.
DF-1091	In QRV settings a "<>" separator wrongfully appears in plain text.	This has been corrected.
DF-1092	Embedded content on Activities breaks.	Embedded content on Activities sometimes shows errors or just looks completely different in general. The content now looks more in-line with what's been added in the object.
DF-1093	Images in Note Description sometimes cause an error in QWM.	This occurred if image size was too big, which has now been accounted for.
DF-1097	When zooming out in the browser while using QWM, a large un-interactable section will appear towards the bottom.	QWM Canvas has been expanded so it will always be visible, even upon zooming out.
DF-1100	Coloring a note object only appears in QWM.	Coloring of note objects can now be seen from all views.
DF-1104	ACL settings are not saved visually.	Checkmarks now visually show saved settings for ACL.
DF-1105	When printing the diagram in a Report Definition, the diagram comes out blurry and in low resolution.	A fix has been implemented so diagram is shown in a better resolution.
DF-1110	Cannot open QDM-files containing international characters.	This has been fixed so they can be opened regardless of characters used.
DF-1122	Arrowhead disappears on ConversationLink connection in QWM.	Arrowhead now remains in QWM.
DF-1124	Cannot link a Capability to Strategic Alignment.	These can now be linked/associated.
DF-1127	Recalculating licenses stops if one of the licenses exceeds the limit.	The recalculation no longer stops if a license type exceeds the limit.
DF-1131	Business Process symbol inconsistency within QWM.	Business Process symbols are now more consistent when using QWM.
DF-1132	When a hyperlink name added from QLM is changed in QWM, it does not update.	This now updates as expected.
DF-1135	ArchiMate icons will not save custom symbol properties.	These can now be saved with custom properties.

DF-1140	Refreshing page on a diagram sometimes causes a blank screen.	Refreshing now reloads the displayed content as expected.
DF-1141	Explorer in QWM goes blank if you change diagram with multiple tabs open.	This now displays the expected properties for the currently selected diagram.
DF-1144	When zooming in/out in QWM, keyboard shortcuts stop working.	Keyboard shortcuts now work regardless of zoom level.
DF-1146	Competence Management: ExtendAll “Extend” button is re-clickable.	This now grays out.
DF-1147	Butpans on Organization Units will sometimes show a gray square, instead of the intended icon.	The icons now show properly.
DF-1155	Business Capability Models have different views/looks in QWM, QLM and from web diagram page.	These are now more similar across the board.
DF-1163	Capability symbol cannot be adjusted in QWM, if zoomed out.	Symbol now behaves as expected in QWM, no matter the zoom level.
DF-1171	Pasting copied text into a description with existing text adds unreasonable line breaks.	Text is now pasted in normally.
DF-1181	Clicking a link to an internal QualiWare object/diagram always opens it in Base configuration.	Now opens in the configuration you click it from (if possible).
DF-1184	Scrollbar doesn’t appear on content that is too long for IFrame.	Scrollbar now appears correctly.
DF-1185	Cloud Architecture Diagram missing owner and responsible properties.	These have now been added.
DF-1188	Character ‘Ø’ may cause QEP crash.	A fix has been implanted so it no longer causes a crash.
DF-1192	PDF External Documents become unreadable if Media Type is selected.	This has been fixed so PDF documents are read normally regardless of selected media type.
DF-1195	Only truncated short descriptions are present in export from Spreadsheet.	Full short descriptions are now available from exports.
DF-1198	Issue with sorting on out-of-the-box “Object Linked data” query.	This occurred due to an error in the executed query, which has been corrected.
DF-1199	Creating custom Repository Explorer causes error when a folder displays no content.	This was due to an error, which has been found and corrected.
DF-1201	Out-of-the-box Query Design causes error when attempting to filter in Query Result Views (QRV).	The way QueryDesign reads data has been adjusted to fix this.

DF-1205	Swedish characters do not work in Datagrid column names.	Swedish characters are now supported in Datagrid column names.
DF-1206	Datagrid filtering does not work as intended.	Bug that has been corrected.
DF-1207	Popup “GWEButtons” container is set to show by default, even if no buttons are usable.	This is no longer set to show by default.
DF-1210	Custom made buttons (i.e. in QRV’s) do not show tooltips.	These now show tooltips.
DF-1211	Symbols in QWM are stuck on resized properties and not reverting globally.	A change has been implemented to fix this.
DF-1212	Left query view of e.g. documents, fails if just one is in a different configuration.	The query that is executed to run this has been corrected.
DF-1215	Date format is not correct in “My To-Do list”	Date format has been corrected in this.
DF-1216	Issues with font size and type when edited from QWM.	This has been corrected so the font type and size changes as expected from QWM.
DF-1219	QualiWareSetup defaults to username rather than LOGIN.	This now looks for login.
DF-1221	Diagrams created through QWM, behave differently in QLM when it comes to ‘snapping’ objects to the grid (ctrl+G in QLM).	These now behave the same in QWM and QLM.
DF-1225	DC-Get-UrlTableFromContainedIn does not return a value.	This was due to a missing parameter that has now been added correctly.
DF-1229	Social Behavior Warehouse (SBW) initial object creation shows wrong data, as it counts entries from both ‘read’ and ‘edit’.	A change has been made to only include “Read” activity, meaning the data should look more like what’s expected.
DF-1239	SCIM issue with groups not updating (synchronizing) properly.	Cause has been found and corrected.
DF-1252	SBW - Repository sync has timeouts - status of sync becomes unknown.	A fix has been implemented. SBW synchronization methods were reimplemented to be invoked through Async call service.
DF-1253	“Link item” links cannot change color, size or font.	Can now change color, size and font like any other links.
DF-1260	Default documents found in the Document desktop are expired.	These documents have been adjusted.
DF-1267	In QWM if you select an object to drag and drop, cursor may sometimes accidentally mark everything while dragging.	A fix has been implemented that prevents this.
DF-1269	QEF Log export limits/truncates log entries even if log size limit isn’t overwritten.	QEF Log exports now show in full if within the log size limit.
